lighten your workload

Impero Workplace

Network management is a complex business at the best of times. Now throw in a demanding workforce, the fast adoption of ever-changing, new technology and the drive towards accountability and increased efficiency. Can you feel your workload stacking up?

Here at Impero, we've spent the last decade making sure that doesn't happen. Working with public and private sector organisations, all around the world, we strive to make network management easy and maximise the benefits that it can offer.

Traditionally specialists in the education sector, recent years have seen rapid expansion into the corporate world,

as demand for the benefits of Impero has become more widespread. We responded, taking the basic principles of our technology and adapting them to meet the changing requirements of the modern workplace. And as simple as that, Impero Workplace was born.

Continually investing in the sector, we have a clever Research and Development team exploring new products and product features that we think you'll like. We also boast a fantastic support network that will see you through from pre-sales consultancy and installation, to ongoing customer care and training. We have various contact points and lots of supporting material, including a responsive helpdesk, an interactive forum and access to a library of technical documents and guides, should you need them.

Impero Workplace Pro

Flexible, intuitive, consolidated, powerful, innovative, cost-effective. These are just a few in an impressive list of adjectives, commonly used by our customers to describe Impero Workplace Pro. Impero Workplace Pro is our flagship product, designed to support network management, desktop management and remote communication in one single consolidated solution.

It's easy to install, it's easy to use and it's easy to see why it's a market leader. Consolidating a number of useful features, the benefits are compelling. Just turn the page and see if you don't believe us.

"Impero's suite of tools has continued to impress us, and now all Serco Prison and Immigration facilities in the UK are using Impero Workplace Pro as the default tool for remote support, filtering and user management."

Serco Group Plc

the benefits of Impero Workplace Pro

save money

From the day it's installed, Impero Workplace Pro starts saving money. By controlling print and managing power, organisational running costs can be dramatically reduced. The power management feature alone is responsible for a typical return on investment (ROI) in just 6-8 months, which can be easily calculated using the reporting function.

As well as these bottom line cost savings, efficiency is significantly improved. Staff administration is greatly reduced and can be reinvested into more value-adding tasks.

save time

The most commonly reported benefit of Impero Workplace Pro is the time it saves. By automating processes and allowing Network/IT Managers to respond to issues and fix problems remotely, valuable hours are saved each day and operational downtime, spent waiting for IT support, is reduced.

The ability to communicate remotely removes most of the logistical administration of organisational training, presenting or demonstrating. No more logistical nightmares sorting room bookings and dates when everyone is in the office, just share a screen and deliver the session.

increase productivity

Impero Workplace Pro is designed to keep employees on task, by removing the distractions of online working. Certain websites, applications and devices can be blocked at an individual, departmental or organisational level, to focus concentration and encourage acceptable behaviour in the workplace.

With real-time visibility of every user's computer, in one central view, managers are able to monitor usage, set violation alerts and record incidents, for evidence in disciplinary proceedings if necessary.

reduce carbon

As well as the financial cost associated with waste, there's an environmental impact to consider. Impero Workplace Pro cuts down on unnecessary print by assigning print credit on an individual basis and applying restrictions to enforce a reasonable usage policy and prevent careless behaviour.

Impero Workplace Pro also provides centralised control of power usage across the network, scheduling remote power on/off and delivering a variety of reports to maintain efficiency and reduce carbon footprint.

reduce risk

The blocking, filtering and key word detection features safeguard organisations from business risk, with immediate alerts to any possible unsavoury behaviour. The monitoring aspect keeps close watch over everything that's going on, on the network, for added reassurance of good conduct.

The central administration function protects the network, keeping software up-to-date and compliant with relevant licensing agreements.

return on investment in 6-8 months

benefits in abundance since 2002

the features in Impero Workplace Pro

Impero Workplace Pro combines network management, desktop management and remote communication in one single consolidated solution. With operations across the globe, Impero Workplace delivers benefits to a whole host of both private and public sectors including retail, professional services, social housing, call centres and the NHS.

computer usage monitoring

Setting the boundaries of acceptable usage, restricting or monitoring users with regards to internet, application and hardware usage.

blocks, detects and filters

Protecting organisations from the risks of the digital age, imposing acceptable user boundaries with key word detection, blocks and filters.

inventory management

Automating inventory checks through a single view and highlighting the age and state of equipment so it can be replaced, refreshed or removed no sooner, or later, than is necessary.

print management

Assigning print credit on an individual basis, applying restrictions to enforce a reasonable usage policy and prevent careless behaviour amongst employees.

power management

Centralising the control of power usage across the network, scheduling remote power on/off, and delivering a variety of reports to maintain efficiency and track savings.

internal communication and presenting

Providing the platform for remote internal communication, facilitating training sessions, product demonstrations, management presentations, meetings and instant messenging.

patch management

Patching all vulnerable software to the latest version automatically, saving valuable staff hours and improving endpoint security.
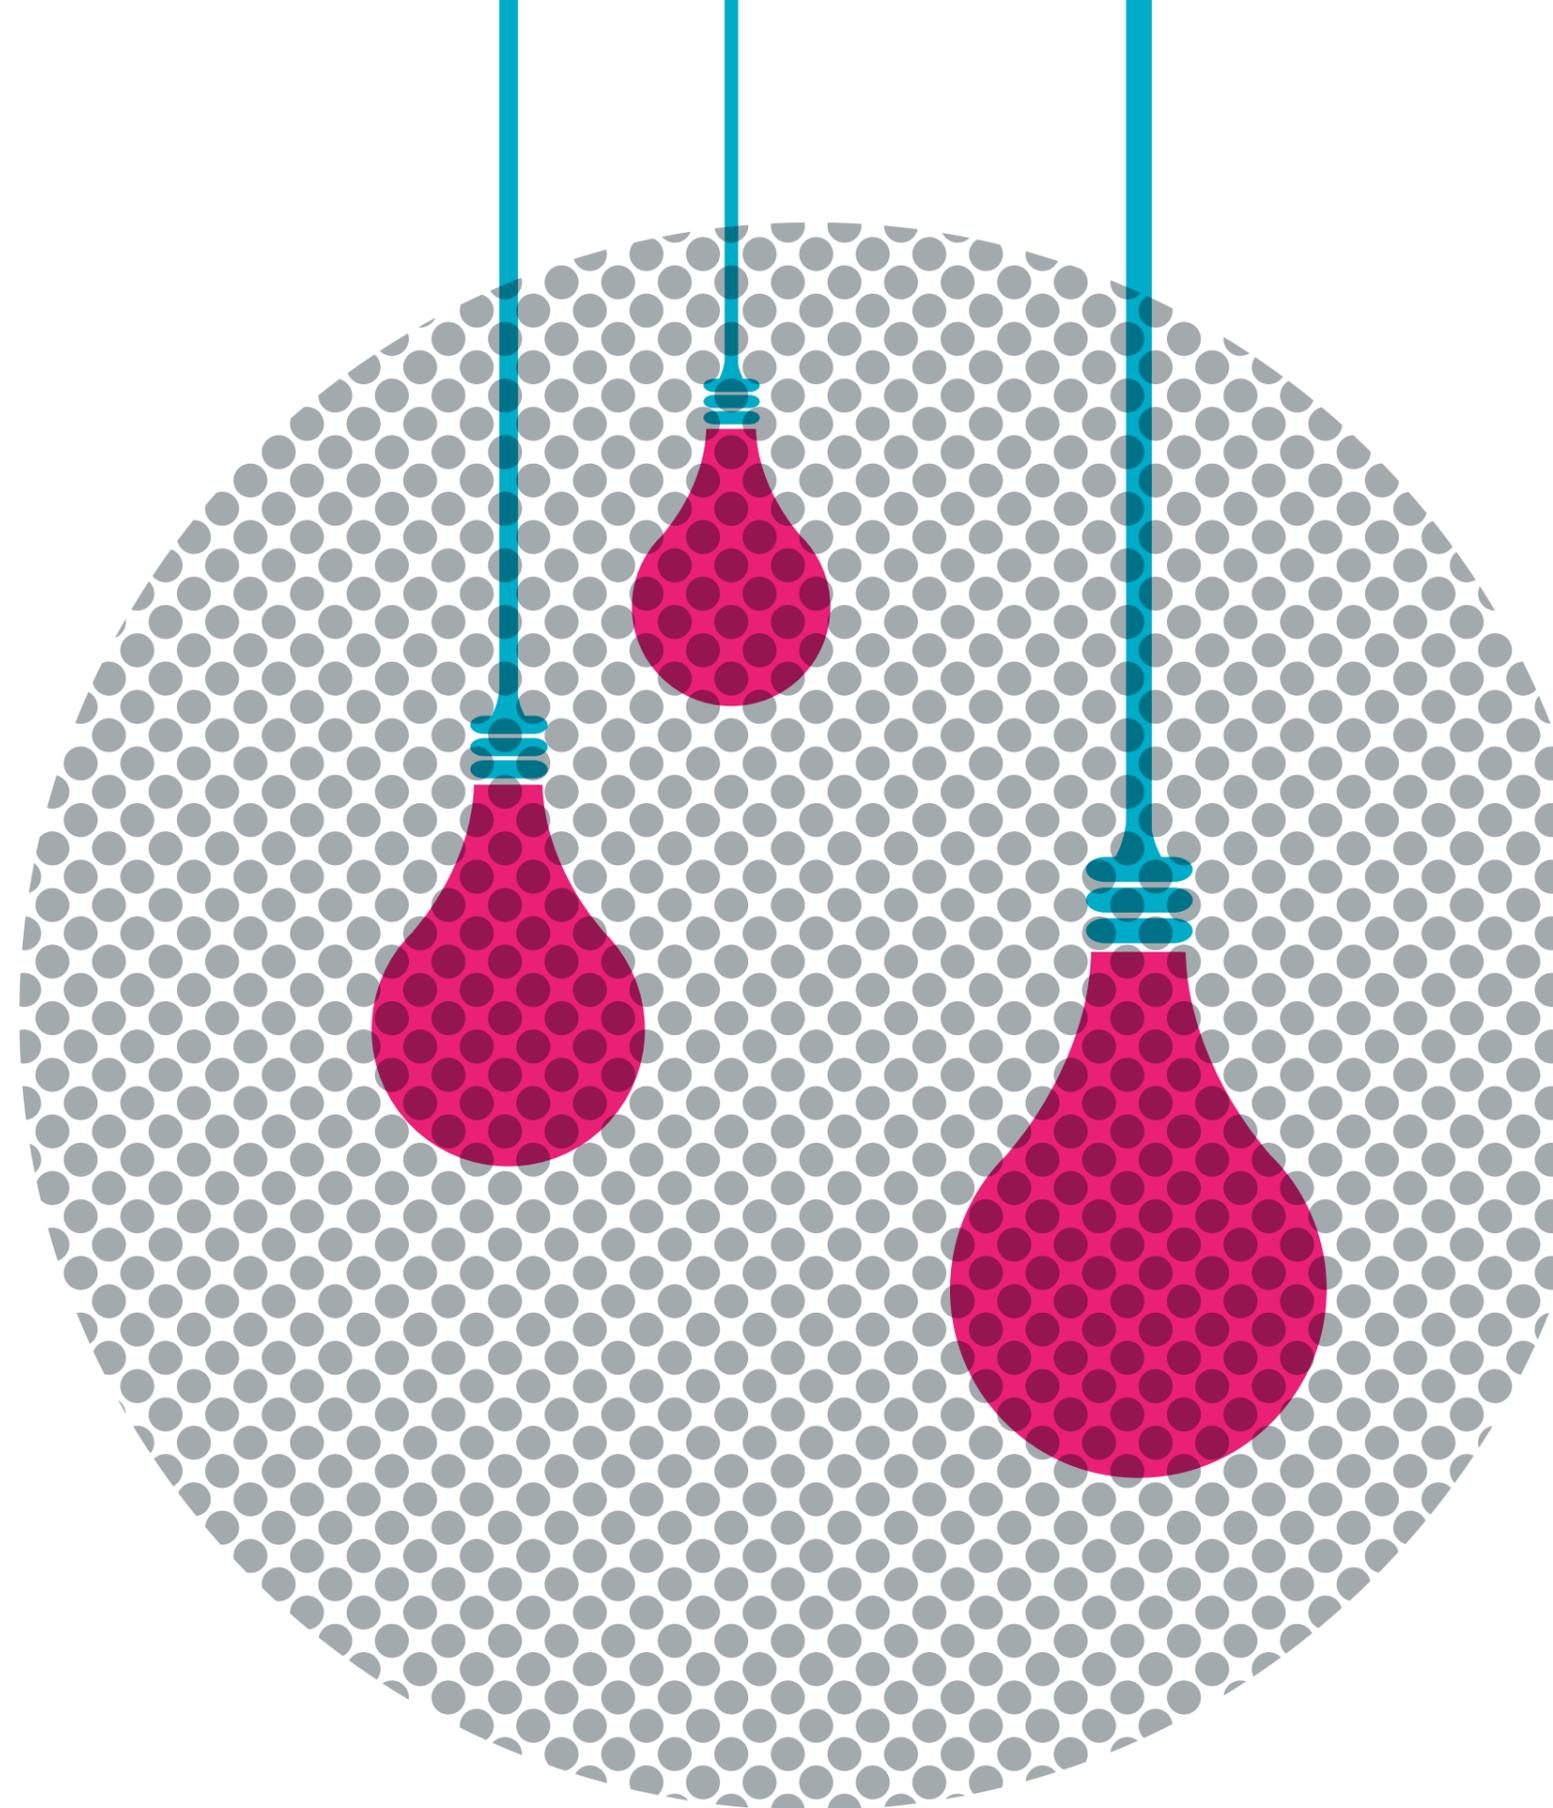

licence management

Managing licence compliance at a network level, highlighting how many licences are being used and restricting access to the software before this exceeds its legal limit.

remote control and support

Providing IT support staff with remote access to computers in order to fix a problem, lend assistance or demonstrate how things should be done.

desktop utilisation

Reporting on the utilisation patterns of specific devices, in order to inform procurement decisions and optimise the usage of existing machines.
